2024年CALIS数据库培训

郭谷雨 科睿唯安客户成功及培训经理 | [chris.guo@clarivate.com](mailto:chris.guo@clarivate.com)

# 讲座目标

本次讲座将帮助您：

- 了解ProQuest系列数据库学术资源及优势
- 熟知ProQuest平台功能，及检索方法
- 掌握检索结果的利用和处理等功能
- 熟悉资源的融合、新增内容

list: From giving me the tools that I used to analyze this project to helping give me the confidence to see it through. I would like to sincerely thank Michael and Suzanne McDonald, Ken Wald, Amie Kreppel, and Stephen Craig.

I would like to thank the researchers, directors, librarians, and archivists at the Strong Museum of Play for letting me play around (pun most certainly intended) in their records. The Strong provided me with a research fellowship in the summer of 2019 to let me investigate their collection of archived developer notebooks, design notes, and a milieu of other insightful documents. These were monumentally important in both my qualitative findings and my theorizing throughout this dissertation.

I am blessed to have made so many wonderful friends—both before and after I began my time here in Gainesville. Many of whom not only kept me sane with sports, food, and great conversation, but many also directly contributed to how I thought, analyzed, and wrote this

According to research by ITRI IEK Consulting, global supply chains need to transform into resilient industry ecochains. A resilient industry ecochain requires high security for identifying, analyzing and mitigating risks against both cyber-attacks-ID theft, malware, piracy, backdoor access, etc.-and physical threats-business espionage, facility damage, terrorism, etc.-which can potentially cause major disruptions in operations. Since a significant amount of sensitive data will be shared in an ecochain, it is vitally important to adopt good risk management principles and systematic defense strategies for overall supply chain security. Stephen Su, Senior Vice President and General Director of the Industrial Technology Research Institute (ITRI) of Taiwan,explains that the "United States and Taiwan can work closely together to develop resilient industry ecochains for key industries such as semiconductors, telecommunication s, automotive, biotech, machinery, etc.

根据ITRI IEK咨询公司的研究，全球供应链需要转变为具有弹性的行业生态链。具有弹性的行业生态链需要高度的安全性来识别、分析和缓解网络攻击（身份盗窃、恶意软件、盗版、后门访问等）和人身威胁（商业间谍、设施损坏、恐怖主义等）的风险，这些风险可能会导致运营的重大中断。由于大量敏感数据将在生态链中共享，因此采用良好的风险管理原则和系统的防御策略来确保整体供应链安全至关重要。台湾工业技术研究所（ITRI）高级副总裁兼总干事Stephen Su解释说：“美国和台湾可以紧密合作，为半导体、电信、汽车、生物技术、机械等关键行业开发弹性产业生态链。”

### Abstract

Translate  

President Tsai Ing-wen triumphed over her populist Kuomintang (KMT) opponent Han Kuo-yu in Taiwan's January 11, 2020 presidential election, garnering 57.1% of the vote to Han's 38.6%. Tsai's Democratic Progressive Party (DPP) also retained its majority in the Legislative Yuan (LY), albeit with the loss of some seats to the KMT and third parties. While there has been considerable attention to Beijing's influence operations, the election illustrated Beijing's limited ability to manipulate Taiwan elections. The outcome portends continued deadlock and tension in cross-strait relations in the coming months. Meanwhile, Taipei and Washington have strengthened ties by launching a series of bilateral and multilateral cooperative projects, intended in part to counter both Beijing's influence operations and its continuing diplomatic, economic, and military pressures on Taiwan.

### Description

This open access book discusses the challenges and opportunities faced by companies in an age that increasingly values sustainability and demands corporate responsibility. Beginning with the historical development of corporate responsibility, this book moves from academic theory to practical application. It points to ways in which companies can successfully manage their transition to a more responsible, sustainable. [Show more](#)

## PURSUIT OF ECONOMIC GROWTH

Thomas Malthus, a British economist born in 1766, is well-known for his book *An Essay on the Principle of Population*. His view, the Malthusian Law, is that population growth is exponential and will always go beyond what is sustainable for the population. Therefore, there will always be people who are hungry and poor. As soon as food becomes available, birthrates increase and consumption grows beyond what is considered to be enough to feed all. Malthus' thoughts are in line with the English economist W. Stanley Jevons born in 1835, who suggested that the more we get, the more we use. The Jevons Paradox claims that increases in resources availability generate increases in resource consumption. For example, an increase in access to energy, similarly with an increase in energy efficiency, will not lead to surplus energy, rather the extra energy available will be immediately demanded and consumed. Both these theories posit that humans naturally push the limits whenever it comes to

### 3.2 Examples of Key Economists Anchored in Economic Growth

Adam Smith, John M. Keynes, and Milton Friedman are three economists whose views are perceived by many over time as laying the foundation of today's society.

Common for the individuals formulating theories and solutions for world development is that they lived in different times. This is especially relevant when it comes to sustainability issues and the current situation. As discussed in Chap. 2, it was not until 1987 that a global agreement

emerged that we are facing an unsustainable future, especially with regard to environmental challenges and resource depletion. When the first economic theorists lived, resource depletion was not a real issue. Many people were poor and did not have access to land, however, on a broader scale, the land and resources were there. It was only that individuals did not have access to them. If forests were cut down for heating, people could move to a new forest and cut that down. Two hundred years ago, the world population was just over one billion and CO<sub>2</sub> emissions were not an issue.

The Industrial Revolution took place at the turn of the eighteenth century. Its defining impact on the economy is associated with the move from handmade production to mass production of goods in factories.

## Chapter 2. Conceptual point of Departure: Sustainable Supply Chain Management

This chapter provides foundation of knowledge through comprehensive literature review of the sustainable supply chain management (SSCM) field to which the research belongs and contributes. The core of the chapter is the sustainable supply chain governance (SSCG) within the field of SSCM, as the purpose of the thesis is to understand how social sustainability governance can improve social sustainability. The chapter is divided into three sections to support the overall purpose of the thesis (see table 2.1). The *first* section provides an overview of the SSCM literature to give traces of advancement in the *evolving* area. Special focus is given on social sustainability to justify the continuation of the research in the field. In the *second* section of the chapter outlines the literature review of sustainable supply chain governance mechanisms to identify main ideas and major themes that also indicates gaps in previously existing research works. The *third* section of the chapter presents the multi-stakeholder initiatives to give an insight of alternative governance mechanisms that brings new perspectives to the research phenomenon. The following table shows the organisation of this chapter.

### 2.1. Sustainable Supply Chain Management

In recent years, sustainability in supply chain management has developed as a major concern for corporations (Yawar and Seuring, 2015; Walker et al., 2015; Wu and Page1, 2011; Pullman

detailed descriptions of particular cases.<sup>1</sup>

The aim of this chapter is to clarify what it can mean, in the academic study of politics, to give simplifying empirical analysis of some kind priority over plain description and explicit prescription. Three main kinds of positive theorizing will be distinguished, which will be called, for want of any better terms, **conditional, rational, and intentional**. **Most of professional political science fits within one or more of these categories, but only a few examples of each can be selected for discussion here.**

### CONDITIONAL ANALYSIS

The analysis of political facts is often cast in terms of the relations between independent and dependent variables, and when it is, the aim is almost always to isolate some relatively simple functional relationships among the values of the variables. Do any of the independent variables correlate strongly with the dependent dimension? Are any of these correlations more than just correlations – that is, evidence of *causal* connections? What are the necessary and/or sufficient conditions for the outcomes of interest? More generally, which prior conditions make these outcomes more or less likely? In the

between religion and vote may be a clear statistical fact, derived by rigorous reasoning from some more elementary (or 'brute') facts about the way a sample **of Detroit's residents have answered questions about their race, religion, occupation**, education, and so on. Admittedly, it may have almost no relation to what these voters would say if asked to explain why they voted as they did (they might say almost nothing about their religious backgrounds or beliefs), but it may still be an important fact in the context of practically oriented speculation about why voters really vote the way they do and what can be done to make them vote as one would like. In short, it may be part of a 'causal' theory of voting, in Detroit or elsewhere, and the theory may be true or false, regardless of what one thinks 'normatively' about voting for any particular party.

**Rigorous statistical reasoning was first widely used in political science to establish and to explain or interpret simple relationships of this kind.** The quantitative study of public opinion and voting is now one of the largest subfields of the discipline. Few of its many findings are perhaps of much interest to political theorists, but the methods and overall approach of such 'behavioural' research are another matter. And recently some of their most important applications have had to do with large claims about the causes and effects of democracy.
